19 October 1962

MEMORANDUM FOR: Director of Central Intelligence
Director, Defense Intelligence Agency

SUBJECT: Additional Information - Mission 3107

1. An NREH/INRH Launch Site has been identified in a wooded area along a ridge line 1.7 nm east-northeast of Calabazar De Sagua and 10 nm southeast of the Sagua La Grande NREH Launch Site. The launch site is connected directly by road with the rail-served town of Calabazar De Sagua and a branch rail line serving a nearby sugar mill passes within a mile of the site. The launch site is comprised of four elongated pads, 190 by 90, arranged in a linear pattern and oriented on a 315 degree azimuth. The northern pair of pads are separated by approximately 750 feet and the southern pair by about 900 feet. A transporter/erector approximately 60 feet in length is in position on each of the two southern pads. A third transporter/erector is observed in a motor pool and a fourth is observed on the site service road. Additional facilities include at least 100 vehicles, 45 tents, 27 buildings and several open storage areas. The launch site appears to be in a late stage of completion or complete. No security fence is apparent. There was no evidence that site construction had begun on photography of 5 September 1962.

2. An NREH Launch Site has been identified 5 nm south-east of Sagua La Grande at 22-43-45N 80-01-15W. It is situated in a level wooded area and contains the following elements: 4 launch positions, 2 missile erectors and 1 probable missile erector; 6 missile transporters with missiles, 1 building U/C with prefabricated arches, 3 buildings 100' x 18', numerous tents and vehicles. There was no evidence of this site on 5 September 1962 photography.
